

Angelos Gkotsinas studied Mediterranean Archaeology at the University of the Aegean and continued his studies with an MSc in Environmental Archaeology and Palaeoeconomy at the University of Sheffield, specializing in zooarchaeology. He holds a PhD in Prehistory, Protohistory and Paleoenvironment of the Mediterranean and Africa from École Doctorale 60, University Paul-Valéry Montpellier 3, France, in partnership with the University of Montreal, Canada. His doctoral research delved into the study of animal bone assemblages from various sites in North Greece, investigating the animal management and diet in north Aegean during the first millennium BC. He is as a scientific collaborator in several excavations and research projects across Greece and Eastern Mediterranean, specializing in the study of terrestrial faunal remains from Prehistory to the Late Antiquity. His main research interests focuses on the exploitation of domestic and wild animals to shed light on the pastoral strategies, economies, dietary habits, cooking practices, and ritual acts of past human societies in Greece and beyond. This focus has led to his publication of articles in international journals, contributions to book chapters, and conference proceedings. He is currently working as an archaeologist at the Ephorate of Antiquities of Elis, where he is involved in the restoration program of the "Pheidias workshop-Paleochristian Basilica" in Ancient Olympia. As an Early Career Fellow in Hellenic Studies with CHS, Harvard University, he is undertaking a groundbreaking study into the socio-political and economic dynamics of Middle Helladic societies in Central and Northwest Greece. His approach, which focuses on animal management practices, promises to shed new light on the intricacies of Middle Bronze Age Greece.
